

1) Median Filter

Removes Salt & pepper impulse noise while preserving images.

2) Gaussian Filter

Smooths the image & effectively reduce Gaussian noise.

3) Bilateral Filter

Reduces noise while preserving fine edges & important details.

4) median filter.

Eliminates isolated black & white dots without affecting text quality.

5) Gaussian Filter

Reduces grainy noisy and produces a smoother image.

6) Histogram Equalization.

Enhances contrast & improved visibility.

7) contrast stretching.

Expands the intensity range to improve brightness

8) CLAE

Enhances local contrast making internal

9) Histogram Equalization

improves overall brightness & intensity.

10) contrast stretching

Expanding the narrow intensity range.
